

Enhance your

# Web Visibility

Enterprise Search

## An estimated 35% to 50% of an organisation's Intranet cannot be indexed

- research statistics from IDC Corporation

### Product Overview

There are fundamental limitations with currently available intranet and web site search offerings, and these have been reported by respected third party analysts. These limitations result in part from the existing search architectures and core technologies, and include:

- Inability to index and hence search for vast portions of information that is connected to and available on an intranet or web site;
- Inability to recreate dynamic pages which result from information stored in databases; and
- Search results being out of date with changes that have occurred to documents by hours and sometimes days

YourAmigo's search products are based on a radical new search architecture that solves the fundamental problems that currently exist with enterprise search.

### Unique Capabilities

- Patent-pending agent architecture which does not rely on conventional spidering;
- Timely indexing of documents, with updates when documents are added, modified, removed, or data changes in a database (this cannot be achieved by other search engines, which rely on a spidering architecture);
- Ability to index complex databases and return results as dynamically-created pages;

- The indexing engine recognises nouns, verbs, etc and tags the information in both the query and the documents in the index so true natural language processing is performed;
- User-selectable results ranking control;
- User-profiling for improved search results;
- Provides computer system administrators with an easy-to-use graphical interface, and
- A snapshot view of the indexed files and folders on their intranet; and
- Highly scalable for operation on a single machine (YourAmigo Enterprise Search), or distribution across a number of servers (YourAmigo Portal Search).

### Further Features and Benefits

- Provides an intuitive web interface for simple and efficient access to information - works like a web search engine, which requires little or no training of users;
- Users can input queries in the form that is most comfortable for them - keywords, specific phrases or natural language;
- For advanced users, YourAmigo provides boolean, phrase, proximity, and domain searches; also offers phonetic search, stemming, wildcard and synonym features.
- Supports multiple thesaurus.

- Security integration with corporate security and access layers so that only permissible results are listed depending on user privileges;
- Ability to search a large number of document types including MS Word, MS Excel, Word Perfect, Adobe PDF & Postscript, XML, HTML, etc
- Automated set-up and installation requires minimal administrator time (installation in minutes); self-configures and automatically adapts to changes; and
- Customisable user interfaces, screen layouts and tunable results ranking.
- Also provides a spidering capability, for backward compatibility with legacy applications.

These key capabilities address the fundamental needs of users seeking to efficiently retrieve information. YourAmigo provides a search solution that can significantly improve an organisation's productivity.

### About Enhance

*Tailored Services For Every Business*

Enhance is an independent, professional services company, based in the UK, offering a wide range of web services to small and mid-sized companies, helping them realise their selling potential via the web.

Our policy is one of customer intimacy. We recognise every company is unique. Hence, our services are specifically tailored to meet a company's business needs.

We take the time to understand a business so they can better understand their customers.
